

## Responses - Singh

1) I agree with creating a Transportation Equity Policy. As the city moves forward, I would like to see the city adopt progressive attitudes towards transportation. There are many other cities (Portland for one) that have made their cities much more accessible to alternate forms of transportation. I am all for making our city greener. Supporting cyclists and other transportation methods is a priority for me.

2) I would support this - but research would have to be done to find the best way to achieve this.

3)

4) We all have to work together. I will certainly work with the cycling community.

5) I am committed to making transportation safer for all. I will commit to working with YTG on making cycling safer and adopting changes to the motor vehicle act to reflect that the roads are not just for motorists.

6) Absolutely!

7) Absolutely!

8) We can create designated areas for bicycle parking. Bicycle "stations" could be created offering storage and safe parking. I strongly believe in making downtown more pedestrian friendly. I would love to see a portion of main street closed during the summer months which would create a much better atmosphere for cyclists and pedestrians.

The questions you pose are very relevant, and I will say that I am a firm believer in lessening the impact of motor vehicles. I will be encouraging alternate methods of transportation and cycling is a big part of this.

I promise to be a councillor that will communicate and discuss ideas around the issues you present. I will be a strong advocate with YTG to make Whitehorse a cyclist friendly city.
